

0000068

(These changes reflect mirror corrections made to improve the accuracy of the water depths archived for these stations.)

Please accept our apology for the late archival of September data. Many changes have occurred in the hardware and software used to process the NDBC data. October, November, December, January and February data will soon follow.

The September 1999 data from NDBC operational stations has been reprocessed and quality checked. All known errors and problems have been corrected. Please replace any NDBC data that you have for September 1999 with these new files.

You will note that some changes occurred in this set of data compared to the previous months of data. Several actions were completed in the field during September, and some corrections were made to improve the accuracy of positions and water depths for some stations. The following identifies these changes:

Position Changes Due to Redeployment or Relocation

46061
 ALSN6

(Any previous positions for these stations should not be changed.)

New Station Established in September 1999

DRFA2

Position Changes Which Are Corrections

44005
 46012
 46025
 46027

(These changes reflect corrections in the accuracy of the position of the stations. All previous data from the current deployment at these stations should reflect this position.)

Water Depth Changes To Reflect Corrections

41002
 41004
 42039
 44004
 45005
 46006
 46023
 46054
 51004
