DATA SET "FINALIZED"						

Procedures for Converting Foreign* BT to NODC UBT

General Overview

Although each data type will have its specific guidelines, certain "constant" information and procedures will apply to the group. These procedures will require interaction with the Suitland and mini computers, and record sheets will be maintained during the process.

The information that will be needed are as follows:

1. Original tape number - It will be necessary with each data tape, to know the density, the blocksize, the number of tracks of that tape. This can be ascertained by the use of a scan program. See sample sheet requesting scan (fig 1). All data types expect certain blocksizes in order for successful conversions. If the original tape is not on acceptable blocksize it may be possible to create that blocksize upon copying (the scan should be reviewed by a senior, to determine what is required).
2. Copy tape number - After review of scan it may be possible to copy originator's tape directly to a back-up-tape. This back-up tape will be sent to Suitland for further processing. Never, repeat never, send tape to Suitland without a copy being made on our mini. This copy tape should be scanned as part of the job on the mini (Fig. 2), and reviewed to be sure that the original compares with the copy.
3. File(s) creation name(s) - Unfortunately many foreign BT data files are not configured in a fashion amenable for NODC processing. It has been determined that both British and Japanese data require sorting in chronological order before processing can occur, and that the German data requires sorting to differentiate MBT from XBT. (Additional ad-hoc programs may be required in the future). ECL runstreams have been generated to operate on the tape that is sent to Suitland. For successful processing this runstream should be copied into your own file for editing. This can be accomplished by @ED,QU myfile:element, your file element. Question marks will be changed to reflect name of incoming tape number and output file name(s). The processor will create the output file name(s), record name, and use them for further conversion. The output file(s) must be savecarded to prevent them from being lost.

*Japanese, British, Canadian, French, German

4. Pass 1 output file name - All BT data require "inventory procedures" for successful processing. This means that a first pass of the data is required to determine what country, institute and/or ship codes are required. The processor will have to add these fields to the records according to originator's code for the same. The NODC codes will be placed in bytes 61-66 as required (if field is left blank, no change is made). Additionally, the reference numbers that are to be incorporated in the final run (Pass 2) must be included in the first line of the Pass 1 file. Bytes 67-71 will serve as the first XBT cruise; bytes 72-76 as the first MBT cruise. Either or both entries are permitted. This file will be passed to B. Gelfeld for further processing (upgrading DINDB records). The first cruise (cruises will be generated sequentially, automatically) and the accession number must be received, entered in the record sheet and returned to Gelfeld after all entries are made to Pass 1 output file.
5. Converted tape number - (Pass 2) All data, hopefully, are now ready for conversion from input to NODC UBT format. The specifics for each conversion, will be found in the Record Sheet that has been established for each data type. The output tape number to be assigned to the run must be determined by the processor who acquires tapes, on B. Stone number, via the command @ASAP*TAPEASSIGN. (Acquiring tapes involve interactive responses that are self-explanatory).
6. Copy tape number - After successful conversion an output tape will be created. This tape must be copied and that copied tape brought back to NODC. An ECL runstream will be used for copying and the processor will have to include in this runstream the input/output tape numbers.
7. Dates - The original data has by now undergone many operations. However, they have not been accessioned! Only two items are needed to incorporate onto the record sheet for the data tape. The dates that Gelfeld receives the inventory file name (for his processing) and the date he completes his processing. Other materials required by Accessions will be generated by Gelfeld and incorporated in a folder by the processor and presented to Accessions. After Accessions does its thing and the folder returns, processing can continue within the frame work of our system.

British BT Processing
(636 Input Blocksize)

- 3). Copy into ownfile, my file
DNODC*CONTRACTOR.BRIT636ECL

The input tape has to be renamed from "B?????" to the appropriate NODC tape number (copy tape)

The output file names have to be renamed.- use the following command
C /BRITSORTED??/BRITSORTEDNN/ A

Where NN is your supplied input.

- 4). Copy into own file, SMC*BRIT.BTBT

- a) modify run "card" as per latest accounting requirements.
- b) change char "card" to reflect proper bin and name.
- c) change @SETC NNNN to @SETC 4000
- d) delete the two @MSG,N Statements
- e) change @ASG,AX BRITNEW644 to file name created in step (3)
BRITSORTED--
- f) change @ASG,AX BRTINV-2 to whatever name you desire - (suggestion: if you generate a two digit number for step 3, maintain this number with some meaningful alpha characters preceding) thus @ASG,AX ????
- g) change @USE INVBRT.,BRTINV-2 to @USE INVBRT., name generated in (f)
- h) add right below the @USE another @USE
@USE BRITISHNEW.,BRITSORTED-- name as in step (3)

- 5). Copy into own file, SMC*BRIT.BRTPS2

- a) modify run "card" as per latest accounting requirements
- b) change char "card" to reflect proper bin and name
- c) change @SETC NNNN to @SETC 4000
- d) delete the two @MSG,N statements
- e) change @ASG,AX BRITNEW644 to file name created in step (3) BRITSORTED--
- f) change @ASG,AX BRTINV-2 to name given in step (4-f)
- g) change @USE INVBRT.,BRTINV-2 to name generated in (f) above
- h) add right below the @USE another @USE
@USE BRITISHNEW.,BRITSORTED-- name as in step (3)
- i) change NNNNNN to the tape number that will be incorporated in step (5)

- 6). Copy into own file, DNODC*CONTRACTOR.Tape copy

- a) Modify run "card" as per latest accounting requirements
- b) Change Reelin and Reelot to appropriate input and output tape numbers

**British BT Processing
(644 Input Blocksize)**

- 3). Copy into own file, my file
DNODC*CONTRACTOR.BRIT644ECL
(See 636 blocksize requirements)
- 4). Copy as in 636 blocksize requirements
do as is for all subdivisions except
c) @SETC 0000
h) @USE BRITNEW644.,BRITSORTED--
- 5) Copy as in 636 blocksize requirements
do as is for all subdivisions except
c) @SETC 0000
h) @USE BRITNEW644.,BRITSORTED--
- 6) Copy as in 636 blocksize requirements
