Subj: Time Series data, Cariaco-5 Program

Doug: I have placed on NODC's anonymous/incoming FTP site a small data set released by Dr. Mary Scranton and Dr. Gordon Taylor, SUNY Stony Brook. The data are from the Time Series station Cariaco cruise-5 and consist of bacteria uptake of fatty acids, bacteria/phytoplankton cell counts and primary production...etc. The data and supporting meta data are contained in a single file called cariaco5.dat.

Note: This is the second submission by this group see NODC reference 9700238. □
