

Acknowledgements and Contacts

Line P data is collected typically 3 times each year, in late winter, spring and late summer. Fisheries and Oceans Canada vessels and personnel collect data at a series of 27 stations along Line P. Usually, 5 of these stations are sampled for oxygen and nutrients. Other special studies are carried out by PIs and graduate students (primary productivity, TCO₂/Alk, DMS, iron distribution, POC/N, sedimentation of particulate materials to deep ocean, etc).

Principals in this program currently include:

Frank Whitney – program co-ordinator (oxygen and nutrient measurements)

whitneyf@pac.dfo-mpo.gc.ca

Dr. H.J. Freeland – physical oceanography (Argo drifters, circulation studies)

freelandhj@pac.dfo-mpo.gc.ca

Dr. C.S. Wong – chemical studies (carbon fluxes, DMS, iron)

wongcs@pac.dfo-mpo.gc.ca

Dr. David W. Mackas – zooplankton studies, mackasd@pac.dfo-mpo.gc.ca

Data placed on our anon ftp site is the product of our WOCE program and has been submitted to WHPO.

Please acknowledge the source of the Line P data when you use it – Line P Program, Institute of Ocean Sciences, Fisheries and Oceans Canada.

Frank Whitney
