

Frequency Domain EOF Analysis of Velocity Profiles for DeSoto ADCP Currents
Frequency Band 0.065 - 0.210 cpd
Mode 1

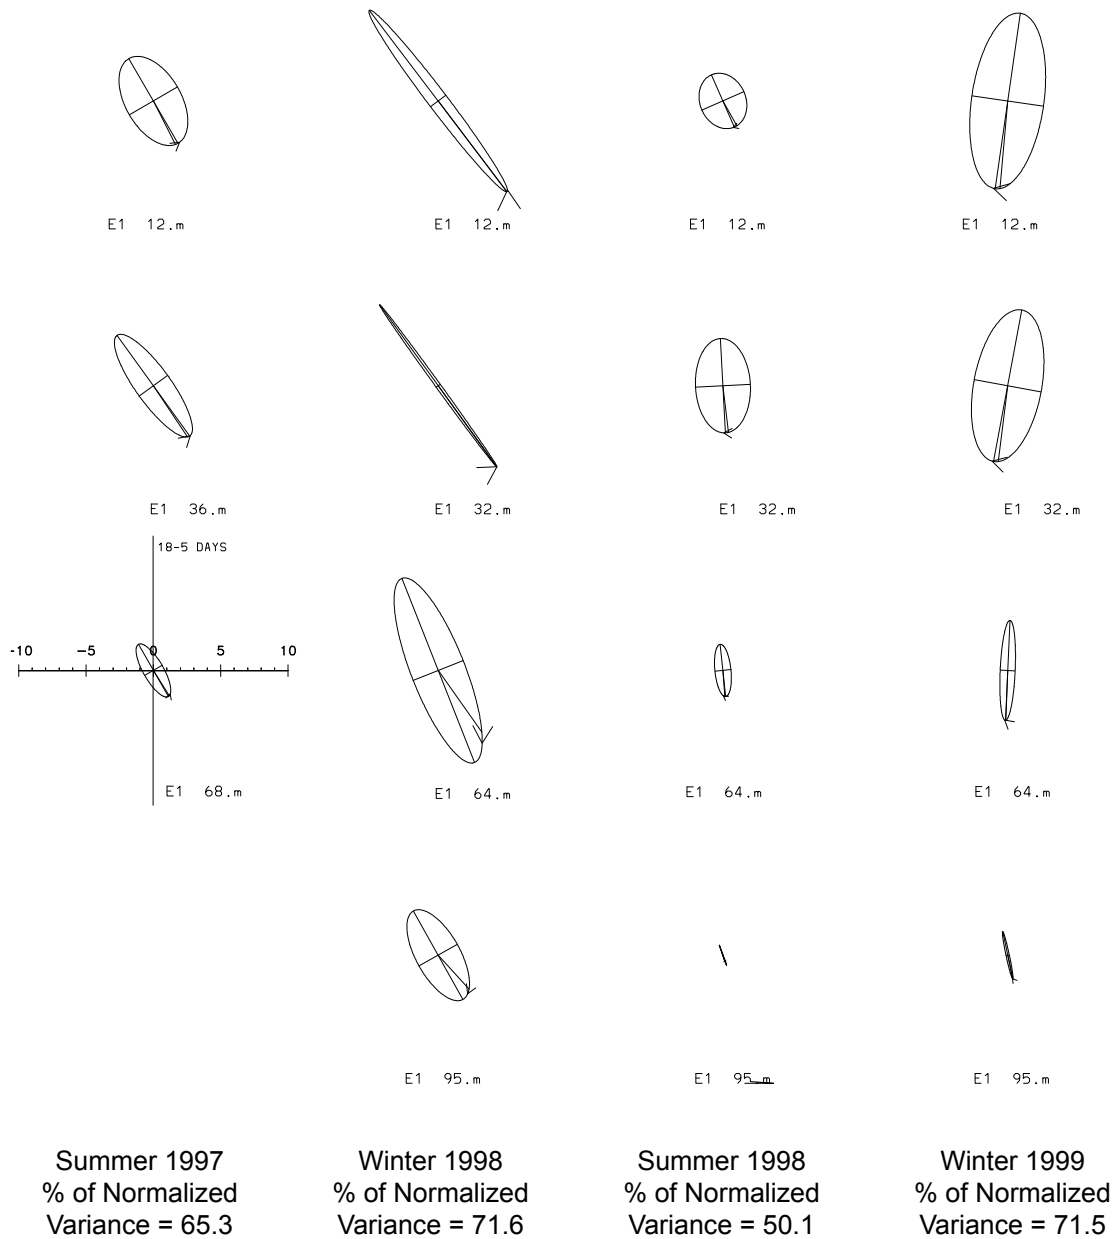

Figure 6.2-7d. Results of FEOF analysis for mode 1 at mooring E1 for summer and winter seasons presented as ellipses for selected depths. The length of the major/minor axes represent the amplitudes of the mode for the v/u current components. The arrow give the relative phase of the mode.
