

08 September 2010 – Brooks McCall Report – Cruise 22 Day 1
TDI Brooks International (for BP)

Day 1 of Cruise 22 after transiting to T16 – S5 all night, deployed the water sampler at this location. (0736hrs.) No surface oiling was observed.

AT 0848hrs got new Guidance report and have to sail back toward T1 (S1, S2, S3, & S4). This will take till 2020hrs this evening to get the location area. So work will not start until morning (09 Sept. 2010). With cruise on-board DO analysis was undertaken. Weather conditions were good with winds of three to five knots.

The CTD cast completed today is summarized in the table below.

Station	Position from wellhead	Fluorescence signal	Signal depth	Comments
BM 212 T16-S5		No signal	408m	No distinct DO sags in this station

There was no indication of oil in the fluorometry data at this site.

A total of one (1) sample was analyzed by Hach method.
