Julie,

We are unable to identify the analytes listed in your validation report. The numbers in the analyte field, for example 1074, are decimal versions of the hexadecimal code the AreaRAE uses to signify an analyte. However, neither the manufacturer's software nor our programmers are able to translate the hexadecimal code into anything meaningful. In addition, there are no GPS coordinates available for the locations in the location table. It should also be noted that this database contains one-hour averages of AreaRAE readings and not unique readings. Please let me know if there is anything else I can do.

Thanks,

Eric

Subject: Re: another CTEH database?

Eric,

Have you had a chance to look into the TS\_DW\_Monitoring Project?

Julie

Julie.Bosch said the following on 5/12/2011 1:37 PM:

Eric,

There is another database in the list that has CTEH as the publisher. It is Project #1121 TS\_DW\_Monitoring and it was last updated last summer. The previous publish listed at CTEH was Tyler Harris - cc'ed on this email.

There are a few corrections that need to be made in order for that database to be validated. I've attached the validation report.

Mon\_parameter - The entries are not drawn from the valid values list. (The latest list is attached.)

Latitudes and Longitudes need to be filled in for 21 Locations listed.

Please let me know if you can address the issues in this database.

Thanks

Julie
