

Bahrain, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for one (1) station in an Excel file. NCEI converted this file to a Comma Separated Values (CSV) file to aid in quality control, mapping, and comparison to Normals from other countries.

The original Excel file is provided along with the CSV file.

Excel Files	CSV Files
BahrainInternationalAirport_41150.xlsx	BahrainInternationalAirport_41150.csv

China, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for 219 stations in individual Comma Separated Values (CSV) files.

Users are asked to note that NCEI computed Mean Temperature (Parameter 5) annual Normals for Taizhong and Tainan to fill in missing values.

The list of all CSV files is provided below. Additional information is provided by the WMO Member below the table.

Introduction of Chinese Climatological Standard Normals

Jie Liao¹ , Yan Shi , Jie Chen, Yufei Zhao

National Meteorological Information Centre, China Meteorological Administration, Beijing, China

1991-2020 surface climate normals dataset of China provides climate background information of 219 stations. The dataset is developed based on the surface observations archived by the National Meteorological Information Centre (Figure 1).

¹ Corresponding author e-mail: liaoj@cma.gov.cn

Figure 1 Locations of the 219 surface stations of Chinese climate normals dataset

1 Calculation methods

Climate normals are calculated from monthly values during the averaging periods. The detailed calculation methods are given in the Chinese national standards for the statistical method of surface climate normals (GB/T 34412-2017) and WMO Guidelines on the Calculation of Climate Normals (WMO No.1203). The calculation includes the following steps: (1) quality control of the observations and metadata; (2) subsection processing applied to relocated stations; (3) calculation of individual monthly values and annual values; (4) calculation of climate normals; (5) quality evaluation of climate normals. The subsection processing of the temperature series is completed based on the homogeneity test results. The climate series of other variables are segmented according to the station location migration information. When the station altitude changes by more than 100 meters or the location change by more than 50km during 1991-2020, the long section of the time series is selected to calculate the climate normals. If two segments are of the same length, the late segment is selected.

2 Climatological Surface Parameters

This dataset contains the mean parameter and sum parameter, extreme parameter, and Count parameter of 8 climate variables, which include temperature, precipitation, air pressure, wind direction and speed, water vapor pressure, snow, sunshine, and hail occurrence days. Parameters in the dataset are listed in Table 1.

Table 1 Climatological Surface Parameters

	Parameter_Name	Units
Principal climatological surface parameters	Precipitation_Total	mm
	Number_of_Days_with_Precipitation_≥_1_mm	count
	Daily_Maximum_Temperature	Deg_C
	Daily_Minimum_Temperature	Deg_C
	Daily_Mean_Temperature	Deg_C
	Mean_Sea_Level_Pressure	hPa

	Mean_Vapor_Pressure	hPa
	Total_Number_of_Hours_of_Sunshine	hours
Secondary climatological surface parameters	Mean_Station-Level_Pressure	hPa
	Boundaries_of_quintiles_of_monthly_precipitation	mm
	Number_of_Days_with_Maximum_Temperature_>=30_Deg_C	count
	Number_of_Days_with_Minimum_Temperature_<=10_Deg_C	count
	Number_of_Days_with_Maximum_Temperature_<0_Deg_C	count
	Number_of_Days_with_Minimum_Temperature_<0_Deg_C	count
	Number_of_Days_with_Daily_Precipitation_>_threshold*m	count
	Number_of_Days_with_Snow_Depth_>_threshold*cm	count
	Number_of_Days_with_Wind_Speed_>_threshold*m/s	count
	Highest_Value_of_Mean_Daily_Temperature	Deg_C

	Highest_Value_of_Daily_Precipitation	mm
	Highest_Wind_Gust	m/s
	Mean_Number_of_Days_with_Hail	count

Hong Kong, China, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for seven (7) stations in individual Comma Separated Values (CSV) files.

The list of all CSV files is provided below. Additional information is provided by the WMO Member below the table.

Excel Files	CSV Files
N/A	CheungChau_45044.csv HongKongObservatory_45005.csv KowloonKingSPark_45004.csv ShaTin_45039.csv TaKwuLing_45032.csv WaglanIsland_45045.csv WongChukHang_45043.csv

Additional Explanatory Information provided by the WMO Member

“King’s Park” (0-20008-0-HKO) and “Kowloon” (0-20000-0-45004) are referring to the same station but under two observing networks.

We reported two parameters, namely Total_Number_of_Hours_of_Sunshine and Global_Solar_Radiation, for King’s Park station.

Total_Number_of_Hours_of_Sunshine is registered in OSCAR/Surface with station name “Kowloon” and WIGOS Station Identifier **0-20000-0-45004**. Please refer to the following link:

<https://oscar.wmo.int/surface/#/search/station/stationReportDetails/0-20000-0-45004>

Global_Solar_Radiation is registered in OSCAR under GAW Regional program with station name “King’s Park” and WIGOS Station Identifier **0-20008-0-HKO**. Please refer to the following link:

<https://gawsis.meteoswiss.ch/GAWSIS/index.html#/search/station/stationReportDetails/0-20008-0-HKO>

India, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for 401 stations in individual Excel files. NCEI converted these files to Comma Separated Values (CSV) files to aid in quality control, mapping, and comparison to Normals from other countries.

Users are advised to note that for high elevation stations in India, the average of the geopotential height of the 850 hPa level are provided rather than Mean Sea Level field (Parameter 6). NCEI changed the Parameter Name and the Parameter number for these stations from '6' to '99' in the CSV files. These stations are identified in bold font.

The original Excel files are provided along with the CSV files produced by NCEI.

Iran, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for 76 stations in individual Comma Separated Values (CSV) files.

The list of all CSV files is provided below.

Excel Files	CSV Files

Iraq, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided monthly means for each of the 30 years in the 1991-2020 period for 12 stations containing up to 11 Parameters in individual Excel files. No 1991-2020 computed Normals were provided by the Member.

NCEI computed Monthly and Annual Normals for each Parameter provided and obtained metadata for each station via OSCAR Surface. The data and metadata were combined into the standard WMO Normals format for Comma Separated Value files (CSV) and the data are provided in 12 CSV station files. No Climatological Normals were computed for Parameters and Months having less than 24 years of data.

Parameters provided for which NCEI computed 1991-2020 climatological Normals are the following:

Precipitation Total

Daily Maximum Temperature

Daily Minimum Temperature

Daily Mean Temperature

Mean Sea Level Pressure

Wind Speed

Relative Humidity

Number of Days with Rising Sand

Number of Days with Duststorm/Sandstorm

Number of Days with Suspended Dust

Evaporation

The original Excel files containing the data for each of the 30 years in the 1991-2020 period are provided.

The 1991-2020 Normals for Iraq were computed and CSV files are provided as a service to the User Community, however users are advised to note that the Normals values could differ from how the WMO Member would compute the Normals values for their stations.

Kazakhstan, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for 229 stations in individual Excel files. NCEI converted these files to Comma Separated Values (CSV) files to aid in quality control, mapping, and comparison to Normals from other countries.

Users are asked to note that the station file Matai_36772.xls contained the WMO Number 36773 (rather than 36772) within the file. The filename of the csv file is Matai_36773.csv while the original filename of the xls file was left unchanged.

The original Excel files are provided along with the CSV files produced by NCEI.

Kyrgyzstan, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided 1991-2020 Normals for a single element (Monthly Mean Temperature) for 32 stations in a single PDF file in the native language. NCEI converted the filenames to English, obtained metadata from OSCAR for as many stations as possible and placed the data for 25 of the stations into the standard WMO Normals format for CSV files.

The original pdf file containing the data from the Member is provided. In addition the CSV files produced by NCEI are provided. Users are advised to note that errors in translation from the provided pdf file are possible.

Lao, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for eight (8) stations in individual Excel files. NCEI converted these files to Comma Separated Values (CSV) files to aid in quality control, mapping, and comparison to Normals from other countries.

Users are asked to note that NCEI recomputed the Annual Normal for Mean Maximum and Minimum Temperature (Parameters 3 and 4) for station Pakse (48955) because the original values were inconsistent with the monthly Normals. The recomputed values are included in the CSV file.

The original Excel files are provided along with the CSV files produced by NCEI.

Macau, China, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for one (1) station in one Excel file. NCEI converted the Excel file to a Comma Separated Values (CSV) file to aid in quality control, mapping, and comparison to Normals from other countries.

The original Excel file is provided along with the CSV file produced by NCEI.

Excel Files	CSV Files
TaipaGrande_45011.xls	TaipaGrande_45011.csv

Maldives, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for five (5) stations in individual Comma Separated Values (CSV) files.

The list of CSV files is provided below.

Excel Files	CSV Files

Mongolia, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for 59 stations in individual Comma Separated Values (CSV) files.

Users are asked to note that for most monthly and annual normals, the Member provided values to six or more decimal places. NCEI rounded these to a single decimal place for publication.

The list of all CSV files is provided below.

Myanmar, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for 49 stations in individual Excel files. NCEI converted these files to Comma Separated Values (CSV) files to aid in quality control, mapping, and comparison to Normals from other countries.

Users are asked to note:

- 1) 31 stations provided Mean Vapor Pressure. All values were clearly erroneous (possibly computed as station pressure). NCEI set all values to missing in the csv files.
- 2) For station Myeik (48110) NCEI found the annual precipitation to be inaccurate. It appeared to have been computed as an Average of the Monthly totals rather than a sum of the monthly totals in the Excel file. NCEI recomputed the annual Normal and provides it in Myeik_48110.csv.
- 3) NCEI recomputed the Annual Precipitation normals for Hmawbi, Maubin, and Pyay from their monthly Normals and replaced the originally inaccurate values in the respective CSV files.

The original Excel files are provided along with the CSV files produced by NCEI.

Additional information provided by the WMO Member is provided below this table.

Nepal, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for 15 stations in individual Comma Separated Values (CSV) files.

The list of CSV files is provided below.

Excel Files	CSV Files
N/A	Bhairahawa_44438.csv Biratnagar_44478.csv Dadeldhura_44404.csv Dang_44429.csv Dhangadhi_44409.csv Dhankuta_44477.csv Dipayal_44406.csv Jumla_44424.csv Kathmandu_44454.csv Nepalgunj_44418.csv Okhaldhunga_44462.csv Pokhara_44434.csv Simara_44449.csv Surkhet_44416.csv Taplejung_44474.csv

Oman, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for 11 stations in one Excel file containing multiple spreadsheets. NCEI converted the spreadsheets to 11 individual Comma Separated Values (CSV) files to aid in quality control, mapping, and comparison to Normals from other countries.

Users are asked to note that for station Saiq airport (41254) the Mean Sea Level Pressure values do not appear to be reflective of expected mean sea level pressure at this location. NCEI set these to missing in the CSV file.

The original Excel file is provided along with the CSV files produced by NCEI.

Pakistan, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for 25 stations in individual Comma Separated Value (CSV) files.

Users are advised to note that for high elevation stations in Pakistan, the average of the geopotential height of the 850 hPa level are provided rather than Mean Sea Level field. NCEI changed the Parameter Name and the Parameter number for these stations from '6' to '99' in the CSV files. These stations are identified in bold font.

Russian Federation (In Asia), 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for 87 stations in individual Comma Separated Values (CSV) files.

Users are asked to note that for station Petropav Kamchatskij, the annual mean vapor pressure value was originally provided as 65. NCEI recomputed the annual average from the monthly values and confirmed the value should be 6.5. This value replaces the original value in PetropavKamchatskij_32583.csv.

The list of all CSV files is provided below. Additional information is provided by the WMO Member below the table.

Saudi Arabia, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for 31 stations in one Excel file containing multiple spreadsheets. NCEI converted the spreadsheets to 11 individual Comma Separated Values (CSV) files to aid in quality control, mapping, and comparison to Normals from other countries.

Users are asked to note the following.

- 1) The submission of Al-Olaa (40401) did not include location and elevation metadata. NCEI determined the location for this station to be 26°28'53"N 38°6'34"E and 624 meters. NCEI added this metadata to the file Al-Olaa_40401.csv.
- 2) NCEI changed the March Mean Sea Level Pressure for Najran_41128.csv from 1081.3 to 1008.3 based on trends in month to month changes in MSLP for this station.

The original Excel file is provided along with the CSV files produced by NCEI.

Sri Lanka, 1991-2020 Climatological Normals

Explanatory Information

The WMO Member provided data for 20 stations in individual Comma Separated Values (CSV) files.

Users are asked to note the following.

- 1) For most monthly and annual normals, the Member provided values to six or more decimal places. NCEI rounded these to a single decimal place for publication.
- 2) NCEI set the annual values for Parameters 20-23 to missing as they appeared inconsistent with the monthly values.

The list of all CSV files is provided below.

United Arab Emirates, 1991-2020 Climatological Normals

Explanatory Information

The WMO member provided data for six (6) stations in individual Excel files. NCEI converted these files to Comma Separated Values (CSV) files to aid in quality control, mapping, and comparison to Normals from other countries.

The original Excel files are provided along with the CSV files produced by NCEI. Additional explanatory information provided by the WMO Member is included below this table.
